Prototype using Ecology Lesson as Foundation

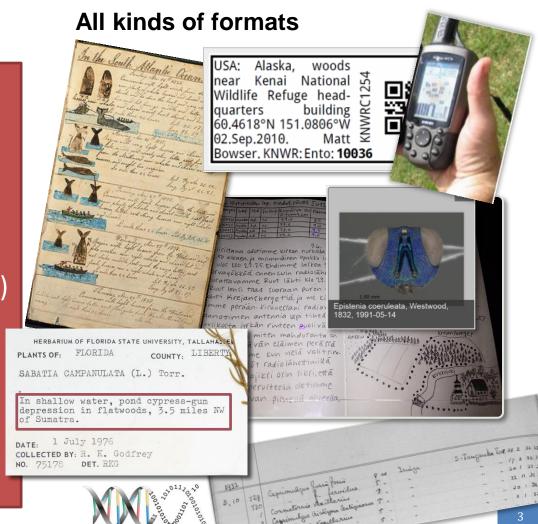

- better spreadsheet skills
- Open Refine
- intro SQL
- intro R and data
 visualization using R
- QGIS lesson
 - UCSB graduate studentSara Lafia

What do our collections data look like?					-117.157255	1914-04-08

Typical data

- what, where, when, who
 - and …
- taxonomic data
- geolocation data
- associated taxa
- habitat, soil type
- abiotic data (temperature, ...)
- trait data (genomic, morphometric, behavioral, phenological, ...)
- paleontologic/geologic data (stratigraphy, isotope, ...)
- media

What possible skills to include? Skills needed (not exhaustive, not definitive)

some known common skill needs

- data evaluation (fitness for use)
- better spreadsheet skills
- (meta) data standards
- data publishing and reproducible research (FAIR)
- using authority files (taxonomy, geography, people)
- georeferencing, geospatial data skills
- data visualization
- data formatting and transformation
- scripting and apis
- specific tools/software: GeoLocate, Open Refine, GBIF tools, Kurator, GNR, collection management software,...

- data and media: management
- data quality (messy data, cleaning, validation, automation),
 visualization, data life cycle

repetitive tasks

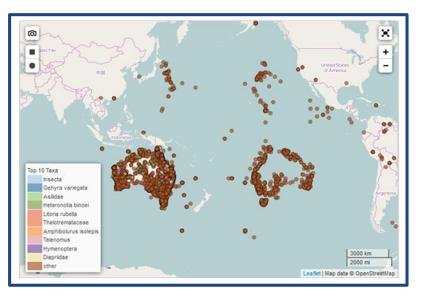

- data cleaning
 - transcription
 - editing
 - updating
 - mapping
- batch editing
- data import, export

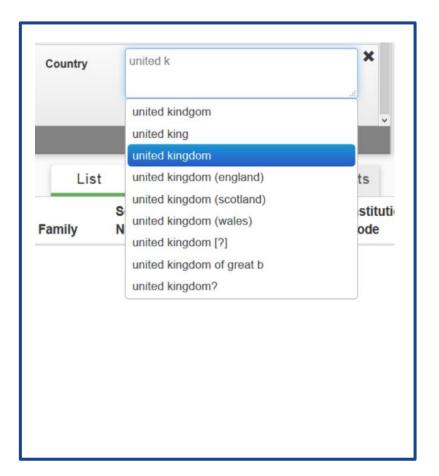

collection data issues

Next steps

- Models for discipline-specific lesson development
- Upcoming outreach
 - CarpentryCon 2018
 - Community input at Digital Data II
 - Instructor training/mentoring in our community
 - develop a renewable resource supply to meet demand
- A New Data Carpentry Community

Go raibh maith agat Thank you!
